Winworks Software, Inc. Announces a Full Inspections System

Winworks Inspect: Fast, Easy, Detailed.

Placerville, California: Winworks Software, Inc. is excited to announce Winworks Inspect, a full inspections system embedded right into our flagship program Winworks AutoShop.

Winworks Inspect gives the ability to create multiple inspections templates and use these full color inspections either in a printed format within our Windows application interface or on our iOS and Android mobile devices. This integrated inspections system improves the workflow of repair activities increasing both productivity and revenue.

Winworks Inspect on a mobile device makes it simple for anyone in the shop to run a full comprehensive inspection on any type of vehicle. With Winworks Inspect, the technician can easily add pictures and comments to an inspection item that links right to the work order so the customer can understand what the technician sees on the vehicle. Winworks Inspect is a great tool for educating the customer on their vehicle and makes upselling needed services stress-free.

Winworks Inspect is a better way to:

- Create and Perform Inspections with Ease
- Build Customer Loyalty Through Transparency
- Create a Higher Dollar Amount Per Work Order

Go to www.WinworksInspect.com for more information

Winworks Inspect is available June 1st 2016.

Winworks pioneered the Windows-based shop management system twenty-three years ago. Since then, working closely with their users, they have added hundreds of innovative features changing the way thousands of auto repair facilities write work orders and track information. Shop owners and service advisors can learn more about the Winworks AutoShop system by visiting the Winworks website at www.winworks.com or by calling 1-800-Winworks.
